Physicians Investing in Physicians

PCI's Project Path is robust, yet intuitively simple to use. It allows anyone to become adept at project management and take control of their construction project. It's as simple as responding to an email.

Jerry M Huffman
PCI Managing Member

PCI's Project Path Overview*

For years project management software was about charts, graphs, and stats. And you know what? It didn't work.

Project Path is a web-based project collaboration tool which tackles medical construction project management from an entirely different angle: A focus on communication and collaboration.

PCI's Project Path brings construction, architectural, engineering, banking, and medical professionals together.

No longer will you be left wondering on the progress of your building or development.

Not comfortable with web-based tools, simply respond to Project Path's program generated emails and your "to-do" is done.

Online Resources

PCI's Project Path tackles project management from an entirely different angle: A focus on communication and collaboration.

PCI's Project Path brings people together by providing you with:

- A Dashboard showing you all your construction projects on one screen;
- A Project Overview providing you with a bird's-eye view of one of your many projects;
- A To-do List which allows you to make lists, add items, assign responsibility and check them off when you're done;
- Milestones which allow you to keep track of what's due, when it's due, and who's responsible;
- File Sharing features for the upload of files, track changes, share deliverables visually.

Project Path Security

Your project data is safe and secure:

- PCI takes a "silo" approach to your data;
- PCI dedicates a separate data base and data files that cannot be viewed or accessed by another company;
- PCI's Project path can only be accessed by your unique UID and Password;

- Each user profile is assigned a role with predefined and corresponding access levels to your project's data;
- PCI's Project Path uses offsite and redundant state-of-the-art computer servers which are protected by biometric locks and 24-hour surveillance;
- PCI's Project Path utilizes product software and infrastructure which is updated regularly with the latest security patches;
- PCI's Project Path relies on a network that is protected by an enterprise-class firewall and SSL encryption.
